

# FiberLite Illuminated Labels

Illuminate the wording on your panel with FiberLite's custom printed labels. The labels come assembled and are backlit with our FiberLite fiber optics. The background is black with white lettering. The label mounting channel is 5/16" high. The mounting channel has adhesive on the back side. Use either the eight-port light source or a separate LED light source (order separately). The labels are as easy to read at night as they are during the day. Cost per label is \$24.50 for a label up to 8.2" in length (part number FLLABEL8) and \$27.50 for a label 8.3" to 14" in length (part number FLLABEL14).

*We need the following information to process your order.*

1. Voltage of your aircraft: 12V or 24V
2. We need the spacing between the center points of your switches or breakers. The first switch on the left side would be the 0" point. Give continuous measurements reading left to right. Please use tenths of an inch rounded off to two decimal places. Your drawing does not need to be to scale. We will center the wording on the center point measurement. See sample below.

MASTER	ALT	AV MSTR	STROBE	NAV LTS	BEACON	LNDG LT	AUX
0"	.75"	1.5"	2.25"	3"	3.75	4.5"	5.25"

3. Circle the end out of which you would like the fiber optic tail to come out. The fibers will come out the back side of the label within 1/6" of the end of the label. You will then drill a 1/8" hole through the panel to feed the fibers back to the light source. The label should be positioned to cover the hole.
