

Fixed Mount Instructions

This mounting kit allows the Eagle and Falcon AOA Display to be mounted vertically above the glare shield in a fixed orientation. The fixed mount allows the AOA Display to be mounted in the pilot's peripheral vision. This mount is included in the Eagle and Falcon kits.

The light shroud is included, but optional. It provides shade to the display so the segments are always clearly visible.

The standard fixed mounting kit is used to mount the display to the glare shield.
